

# Brooktrout Technology Expansion Capability

AN  
INDUSTRY FIRST

## Cantata Offers Software-Based LAN Fax Expansion Capability

Cantata's Brooktrout **Technology Expansion Capability** (TEC) allows customers to increase the feature set on their Brooktrout TR1034™ fractional T1/E1 intelligent fax boards through the simple process of downloading and installing a software license key.

With TEC customers can easily and efficiently increase the channel densities on their new or existing Brooktrout TR1034 intelligent fax performance fax capabilities.

The first boards to be TEC-enabled by Cantata are the fractional T1/E1 configurations of the TR1034 intelligent fax boards. Using TEC, customers can upgrade to 8, 16 or 24 channels of T1 fax, or 10, 16, 20 or 30 channels of E1 fax. Since the TEC-enabled fractional TR1034 intelligent fax boards can be configured to accommodate higher channel densities, customers are able to free up valuable uPCI slots. TEC also gives customers the flexibility to buy the density they need now and grow into their fax solution as their requirements change.

With TEC, additional channels are enabled using a downloadable software license key that installs onto any existing fractional T1/E1 TR1034 intelligent fax board. The software license key can be purchased from any authorized Cantata reseller or application partner. This quick and easy path to higher density T1/E1 intelligent fax boards reduces system downtime, support costs, and simplifies administration.

**To learn more on how to expand the capabilities of your new or existing Brooktrout TR1034 T1/E1 intelligent fax board, contact Cantata or your local reseller.**

## Brooktrout TR1034 Overview

*The TR1034 offers enterprise customers a line of 33.6 Kbps intelligent fax boards with high performance fax capabilities for a variety of computer-based fax applications, such as network fax, fax broadcast, unified messaging, and business process automation*

*The TR1034 line of intelligent fax boards offers customers a complete V.34 fax platform with all the performance and reliability that made Cantata a world leader in intelligent fax. The TR1034 is a single slot fax board that supports the V.34 standard, delivering fast 33.6 Kbps fax transmission speeds, with 4 to 30 T1/E1 fax channels per board, and features an onboard T1/E1 interface. For customers, this delivers significant transmission cost savings, increased service capacity, and full interoperability with the growing installed base of V.34 fax machines*
